THE PHARMACISTS OF USC

SERVICES

Diabetes Screening

Diabetes is a condition in which your body cannot process sugars from food effectively. Long-term complications of diabetes include kidney and eye problems, heart attacks, and decreased sensation in the arms and legs. These complications can eventually lead to other serious medical problems and even death. Early detection of diabetes can help patients control their sugar levels before it's too late.

Get your blood sugar checked today.

Hypertension Screening

Hypertension or high blood pressure occurs when the pressure of the blood flowing through your arteries is abnormally high. The increased pressure puts extra stress on vital organs and can lead to kidney failure, stroke, eye problems, heart attacks, or heart failure if left untreated. Hypertension is a very common disease in persons over the age of 50 and is one of the leading causes of death in the United States.

To assess if you are at risk for hypertension, get your blood pressure taken today.

Cholesterol Screening

High cholesterol is a significant problem in the United States today. Many people who have high cholesterol are not even aware of it! High cholesterol increases your risk for diseases such as heart attack and stroke. Everyone over the age of 20 should get their cholesterol checked at least once every 5 years.

Have you checked your cholesterol lately?

Hormonal Contraception

A convenient service that offers a one-on-one consultation with a pharmacist to select and prescribe the most optimal form of contraception for you. Whether you are interested in starting or changing your form of birth control, a pharmacist can help you understand your options.

Call and ask to speak to a pharmacist.

SPECIALTY SERVICES

Immunizations

Are you up to date on your vaccines? In addition to yearly flu shots, we can provide a variety of immunizations to help keep you healthy. These include vaccines for hepatitis A and B, meningococcal meningitis, pneumococcal disease, shingles, and tetanus. Tetanus boosters are available with or without pertussis (whooping cough) protection.

Ask your pharmacist which vaccine is right for you.

International Travel Health Clinic

Are you traveling to a foreign country in the near future? If so, you may need protection from various diseases found in the country you are visiting. During a travel visit with the pharmacist, you can get the immunizations, prescriptions, and over-the-counter products you need to stay healthy abroad. In addition, you will be able to discuss information including geography, climate, political and social environment, embassy locations and phone numbers in case of an emergency, health risks, precautions and various other resources needed for travel.

Travel with peace of mind—make your appointment today.

Smoking Cessation

Are you a smoker who wants to quit? Our clinical pharmacists will guide tobacco users through the process of quitting. We offer a series of in-depth, one-on-one support sessions, which include behavioral recommendations, information regarding withdrawal symptoms, and development of a personalized plan for quitting with quit date identification and proper medication selection. At each visit, our pharmacists will provide information and suggestions on how to prepare and what to expect after stopping cigarette smoking.

Let us help you live smoke-free.

SERVICES BY REFERRAL

The following service requires a referral from a physician. Ask your pharmacist to contact your physician if this service is right for you.

Latent Tuberculosis Infection Monitoring

If your skin test for tuberculosis (TB) was positive and your chest x-ray was negative, your doctor may recommend a course of medication to prevent you from developing “active” TB in the future. Our pharmacy can help you understand the risks and benefits of taking this medication. We will guide you through the treatment course by monitoring your progress, managing side effects, and answering your questions along the way.
